SUMMARY

Motivated B.Tech Computer Science student with expertise in **Python development, AI Agents (LangGraph), and Full-stack AI applications**. Proficient in building automated systems using **FastAPI, React, and LLMs**. Seeking an entry-level AI/Python Developer role to solve complex industrial challenges

EDUCATION

GH Raisoni University, B.Tech - CSE

Aug 2023 – May 2027 | Amravati, Maharashtra

Relevant Coursework: Data Structures & Algorithms (DSA), Database Management Systems (DBMS), Computer Networks, and Machine Learning.

SKILLS

Programming Languages (Python, SQL, HTML5, CSS3, JavaScript) | **Web Frameworks & Libraries** (Django, Pandas, NumPy, Matplotlib, Seaborn, Bootstrap, FastAPI) | **Core Concepts** (OOP, Machine Learning, DBMS, REST APIs, Git & GitHub, DSA, AI Agents (LangGraph), LLM Orchestration) | **Tools** (VS Code, Jupyter Notebook, Git, GitHub)

PROJECTS

SmartAgri: AI & IoT-Powered Precision Agriculture Dashboard, An IoT and AI-powered web application providing real-time soil diagnostics, image-based crop disease detection, and automated crop calendars. May 2026 – Jul 2026

Project Description: Developed a comprehensive, full-stack AgTech web application designed to assist farmers in real-time soil diagnostics, localized disease/weed detection, and smart crop planning using Machine Learning and Generative AI.

Key Contributions & Features:

- **IoT Sensor Data Pipeline:** Implemented an automated pipeline to fetch and record soil telemetry, displaying real-time analytical trends with a 95% data-sync efficiency.
- **Local ML Predictors:** Deployed localized ML models (via Pickle) to predict the best-suited crops with a 92% classification accuracy rate.
- **Generative AI & Computer Vision Integration:** Leveraged **Groq API** (Llama-3.1 & Qwen Vision) to build a multimodal disease diagnosis feature that analyzes crop leaf images, identifies plant pathogens, and delivers localized, actionable treatment reports in Marathi.
- **Dynamic Crop Calendar:** Designed a robust multi-user calendar system that dynamically schedules daily agricultural tasks (sowing to harvest) based on custom sowing dates.
- **Location-Based Weather Services:** Integrated the **Open-Meteo API** alongside Geocoding APIs to offer precise, location-aware weather forecasting and farming alerts.
- **Interactive AI Chatbot:** Created a multilingual AI Agronomist Chatbot using Generative AI to provide immediate answers to farmers' questions regarding soil testing and crop management.

AI-Powered Customer Complaint Management System (Pharma QMS ⚡), An AI-native QMS module designed to automate complaint intake and risk triage for pharmaceutical manufacturing Aug 2026 – Aug 2026

- **End-to-End AI Integration:** Developed a full-stack application using **FastAPI** and **React** to automate the extraction of structured data from unstructured pharmaceutical complaint emails.
- **Multi-Node AI Agents:** Implemented a stateful AI workflow using **LangGraph** to orchestrate specialized agents for data extraction and compliance-based risk assessment.
- **LLM Orchestration:** Leveraged **Groq API (Llama-3.1 & 3.3)** to achieve high-precision extraction of Product Names and Batch IDs, reducing manual data entry time by ~80%.
- **Real-Time State Management:** Utilized **Redux Toolkit** to build a reactive frontend that instantly synchronizes AI-extracted insights with complex regulatory forms.
- **Automated Risk Triage:** Built an intelligent assessment engine that categorizes complaint severity (Critical/Major/Minor) and generates standardized medical summaries for Quality Assurance teams.
